The Archimedes Screw was invented by Archimedes, a Greek scientist, between 287 BC and 212 BC. Yet he didn't mention the invention in his works at the time. It was originally used to transport water upwards as a manual pump, first turned by hand then later by use of a motor. It is used to irrigate fields, drain ships, mines and land as

Archimedes' principle

In this experiment you will determine the unknown ratio of copper (Cu) to aluminum (Al) in a simulated "alloy" of the two metals. The experimental apparatus consists of a precise digital weight scale, a volumetric flask, a pipette, distilled water, a long bar of Cu, a long bar of Al, and a simulated Al/Cu "alloy".
